

LANDSCAPE EDGING

INSTALLATION INSTRUCTIONS

1

Clear the installation area of grass, loose soil, mulch, and debris. Create a score along the installation area with a spade or shovel.

2

Insert the edging so that the edging height above ground is 2 inches or less. Stake edging along installation as needed to secure the design.

3

Backfill and tamp soil against the edging on both sides to secure the wall. Spread mulch or other ground cover up to the wall of the edging.

HELPFUL TIPS & INFORMATION

Preparation:

Allow the edging to relax in the sun to allow for thermal expansion. Installing the edging when expanded and pulling tightly can reduce undesirable waves in straight installations.

Enough anchoring stakes are included to accommodate a typical installation. Certain conditions and landscape designs will require additional stakes, which are available in stores and online.

To connect two pieces of edging, overlap the edging ends and place the stake hook over the top of both edging pieces.

Always use proper safety precautions when cutting and staking edging. Protective eyewear and gloves are recommended during installation.

Cutting:

Edging can be cut with a fine-toothed saw or heavy-duty snips. For best results, cut between scallops.
